There are many companies that have chosen to use a hosting service to house their corporate web site. While this may alleviate some of the overhead necessary to keep a web server functional, there can also be certain restrictions that are removed when hosting the site in-house. There are many additional features with the Zeus Technologies Web Server 4.0 that you won't see with other Linux or UNIX-based web servers and it receives our Editor's Choice Award for value and functionality.

Web Server 4.0 has the capacity to host thousands of web sites however one should deck out the host machine with the best components to easily achieve this level. UNIX and Linux operating systems can host this Zeus Technologies software. The server is compatible with computer systems using one or two Intel Xeon/AMD Opteron processors. We also suggest you arm the system with the most amount of RAM available and install a high speed gigabyte network interface card for the best results.

The package only takes a few minutes to install on the computer system and within minutes you'll be ready to start the web server's configuration process. The package includes detailed information in their documentation that can help with the product's setup. A web browser-based application is used to access the management console which we found quite easy to understand as it is well laid out.

Administrators can set up virtual servers as well as subservers that can their own virtual servers and web sites. The management console also pro-

Companies that have been contemplating hosting their own web sites within the organization should have a look at the Zeus Technologies Web

vides a wide variety of reports that will assist support personnel with the operation and management of the server.

There are several features of the Zeus Technologies Web Server 4.0 that you won't find with the open source Apache server that include DoS (Denial of Service) attack protection, malformed HTTP header protection, HTTP request filtering in addition to built-in attack monitoring and logging. Web sites that wish to offer user authentication for entry into location can use LDAP services that integrate with this web server. Web programmers will be impressed with the various services that are supported by this package that include PHP scripting, CGI, Fast CGI, ISAPI, NSAPI, server-side includes and FrontPage Server extensions.

Server 4.0 and all of the features that it offers. It is available directly from the company with a cost of \$2,646 including 1 year support. More information and technical specifications on the product is available on the company's web site at [www.zeus.com](http://www.zeus.com).
